## ZNODE MULTIFRONT - SASS USER GUIDE

---

SEPTEMBER 2015

- **STEPS FOR SCSS COMPILATION:**

1. Each theme contains SASS folder containing 4 files as follows:

- `_base.scss`
- `base.scss`
- `footer.scss`
- `header.scss`

We have to edit `_base.scss` and `base.scss` file for the changes.

2. `_base.scss` file contains all variable with their values. We need to update variables such as color code, font size etc.

3. For CSS changes, updation in `base.scss` file is required.

**Note:** Base file contain only general control and header footer section css.

4. After updating SCSS file, compile SCSS file to generate `base.css` file.

5. For SCSS Compilation in Visual Studio, add SassyStudio plugin in Visual Studio. After adding this plugin, it will automatically compile SCSS into CSS file.

6. Compilation of SCSS can also be done by using online available tools such as:

- <http://sassmeister.com/>
- <https://visualstudiogallery.msdn.microsoft.com/85fa99a6-e4c6-4a1c-9f00-e6a8129b6f4d>
